

SSW-215 Project Update

Richard Kirk, Jeffrey Fitzsimmons, Tyler
Reinert, Mateusz Marciniak

Our Initial Idea

On The Way! - a way to find
restaurants and stop along your route

What we were going to do

- Use the Google Maps API and the Google Directions API
- Write algorithm to find closest places

Why we are deciding not to

- Too much abstraction from what we are trying to learn -
Javascript, HTML, CSS
- Using the Google API and managing auth keys beyond scope
of knowledge for our group

What we are doing instead

We plan on making our own variation of the sensational game

Wordle. Wordle is a game giving you six chances to guess a random five letter word. The word is the same for everyone doing the Wordle, however the word changes everyday.

Where will we differ?

Our version of Wordle will make it capable to customize the parameters of the puzzle

What this will look like:

- Customizable word length (3-7 letter words)
- Customizable number of tries
- Timed
- Customizable color theme
- Not just one puzzle a day!

What we are hoping

We are hoping to successfully:

- Learn and use Javascript to its fullest extent
- Create our own variation of Wordle
- Communicate and coordinate with and as a team
